# The Present and Future of FX Execution Algorithms

March 3, 2023

After years of mediocre growth, FX execution algorithm adoption is looking up. Most buy-side segments have witnessed a healthy rise in the use of algos since 2020, especially on the real money side. Both fund managers and hedge funds have seen an uptick of algo use, with adoption now at 30% and 40%, respectively.

## Percent of Firms Using FX Execution Algorithms

Note: Based on responses from global users of foreign exchange from 2014 to 2022. Numbers in parentheses represent number of respondents.

**Growth in algo adoption is a solution to a long-lived problem.** The buy side is increasingly dealing with fragmented liquidity and a need to execute transactions more efficiently. By using FX algos, the buy side benefits from improved technology designed to address gaps in liquidity, data and other inefficiencies tied to over-the-counter markets.

**The FX Global Code (FXGC) emphasizes transparency.** It turns out, improved technology and greater efficiencies on the desk are not the only drivers of algo adaption. Principle 18 of the FXGC includes guidance for algo providers, shining a light on how algos are marketed and managed. The FXGC emphasizes transparency and disclosure requirements that are intended to help consumers of algos understand more

thoroughly the nature of the tools they may (or may not) use. It appears the more the industry knows about a product, the more likely they are to use and trust it.

**Has the adoption of FX algos plateaued?** Because FX algo use has not achieved the same market share as in other asset classes, it is fair to ask if adoption is leveling off. Our data shows the answer is a resounding "no." Trading in size in difficult markets require finesse and creativity, which algos can provide.

Of course, creativity also comes into play when deciding which algo is most suited for the market conditions in which participants are trying to execute. This often requires sell-side guidance to help buy-side traders use the optimal tool for the market conditions. (Spoiler alert: Despite the popularity of algos, relationships still matter.) In equity markets, these challenges spawned "algo wheels"—something likely coming to FX markets.

**Where will more algo adoption take place going forward?** The opportunity for additional algo growth sits squarely in other FX products. The value of algorithmic execution in FX spot is mostly understood, and adoption will continue to rise. The ability of algo providers to apply this technology to other instruments such as non-deliverable forwards (NDF) represents an area of potential usage. To date, uptake has been limited.

Talk of the use of algos in certain FX swaps and options—particularly non-standard dates—is probably sometime away. However, if the trajectory of electronic trading and algo use gleaned from other asset classes is any indicator of the future of FX algo adoption, the prospects of broad adoption are very good.

The data contained in the Document is based upon a particular bank's scope, which reflects a bank's data submission, business structure, and sales revenue Reporting methodology. As a result, any data contained in the Document may not be directly comparable to data presented to another bank. For franchise benchmarking, Crisil Coalition Greenwich has implemented equal ranking logic on aggregate results i.e., when sales revenues are within 5% of at least one competitor ahead, a tie is shown and designated by = (where actual ranks are shown). Entity level data has no equal ranking logic implemented and therefore, on occasion, the differences between rank bands can be very close mathematically.

The data in this Document may reflect the views reported to Crisil Coalition Greenwich by the research participants. Interviewees may be asked about their use of and demand for financial products and services and about investment practices in relevant financial markets. Crisil Coalition Greenwich compiles the data received, conducts statistical analysis and reviews for presentation purposes to produce the final results.
