

# AI in banking: Obstacles to transformation

May 7, 2025

For banks, the process of adopting AI has been neither easy nor smooth. As mentioned in our [prior blog post](#) on artificial intelligence, corporate and commercial banks have deployed valuable AI use cases for some specific front-office applications. In many other areas, however, progress has been slow. For example, AI adoption has lagged significantly in the document-heavy Trade Finance business due to feasibility and regulatory hurdles. Those challenges are not unique to Trade. In fact, banks face significant challenges across the board.

The first among those challenges is data. For AI applications to work, they must have accurate, consistent and timely data. Banks' internal systems are notoriously fragmented and complex. Banks are investing millions of dollars to knock down silos and otherwise modernize data management systems, but the industry has a long way to go to harness the full potential of AI.

As banks work to harness data to feed AI solutions, they are bumping up against new challenges in privacy, security, and regulation. Regulators in Europe, and at a slightly slower pace in the U.S., are working to construct regulatory frameworks for AI that would protect privacy, prevent discrimination, ensure safe and reliable AI models, and give consumers an option to opt out. These concerns are especially relevant in essential banking businesses like lending, in which regulators are closely scrutinizing the use of AI in credit decisions.

Banks also have natural incentives to move slowly with AI. Data security, fraud prevention and asset protection are non-negotiables for banks, and it's understood that a single breakdown can undermine client trust and damage brands that have taken decades to build.

However, assembling development teams with the technical skills and industry understanding needed to create and implement safe AI applications can be difficult, especially when banks are competing against the tech industry for top talent.

Make no mistake: AI is transforming banking, and no bank can afford to sit back and wait to see how this all plays out. Despite the many challenges, banks must be moving proactively and even aggressively to determine how and where AI can be integrated into their businesses and workflows to develop internal pilots for testing and proof of concept, and to roll out real-life use cases through which AI begins to transform parts of their business.

[Amos Welder](#), Relationship Director—Corporate Commercial Banking, and [Kassie Krivo](#), Senior Relationship Manager—Corporate Banking, are the authors of this publication.

Coalition Greenwich, a division of CRISIL, an S&P Global Company, is a leading global provider of strategic benchmarking, analytics and insights to the financial services industry.

We specialize in providing unique, high-value and actionable information to help our clients improve their business performance.

Our suite of analytics and insights encompass all key performance metrics and drivers: market share, revenue performance, client relationship share and quality, operational excellence, return on equity, behavioral drivers, and industry evolution.

## About CRISIL

CRISIL is a leading, agile and innovative global analytics company driven by its mission of making markets function better. It is majority owned by S&P Global Inc., a leading provider of transparent and independent ratings, benchmarks, analytics, and data to the capital and commodity markets worldwide.

CRISIL is India's foremost provider of ratings, data, research, analytics, and solutions with a strong record of growth, culture of innovation, and global footprint.

It has delivered independent opinions, actionable insights and efficient solutions to over 100,000 customers through businesses that operate from India, the U.S., the U.K., Argentina, Poland, China, Hong Kong, and Singapore.

This Document may contain analysis of commercial data relating to revenues, productivity and headcount of financial services organisations (together with any other commercial information set out in the Document). The Document may also include statements, estimates and projections with respect to the anticipated future performance of certain companies and as to the market for those companies' products and services.

The Document does not constitute (or purport to constitute) an accurate or complete representation of past or future activities of the businesses or companies considered in it but rather is designed to only highlight the trends. This Document is not (and does not purport to be) a comprehensive Document on the financial state of any business or company. The Document represents the views of Crisil Coalition Greenwich as on the date of the Document and Crisil Coalition Greenwich has no obligation to update or change it in the light of new or additional information or changed circumstances after submission of the Document.

This Document is not (and does not purport to be) a credit assessment or investment advice and should not form basis of any lending, investment or credit decision. This Document does not constitute nor form part of an offer or invitation to subscribe for, underwrite or purchase securities in any company. Nor should this

Document, or any part of it, form the basis to be relied upon in any way in connection with any contract relating to any securities. The Document is not an investment analysis or research and is not subject to regulatory or legal obligations on the production of, or content of, investment analysis or research.

The data contained in the Document is based upon a particular bank's scope, which reflects a bank's data submission, business structure, and sales revenue Reporting methodology. As a result, any data contained in the Document may not be directly comparable to data presented to another bank. For franchise benchmarking, Crisil Coalition Greenwich has implemented equal ranking logic on aggregate results i.e., when sales revenues are within 5% of at least one competitor ahead, a tie is shown and designated by = (where actual ranks are shown). Entity level data has no equal ranking logic implemented and therefore, on occasion, the differences between rank bands can be very close mathematically.

The data in this Document may reflect the views reported to Crisil Coalition Greenwich by the research participants. Interviewees may be asked about their use of and demand for financial products and services and about investment practices in relevant financial markets. Crisil Coalition Greenwich compiles the data received, conducts statistical analysis and reviews for presentation purposes to produce the final results.
