

Capturing the Insurance Opportunity

March 20, 2018

As investment and regulatory requirements become more complex, insurance companies globally are increasingly turning to external asset managers to help with specific investment strategies and solutions.

In Europe in particular, regulation is driving these opportunities, but also presenting challenges for asset managers. Understanding how regulation impacts insurance companies' asset allocation decisions is key. And asset managers that simply "push" their capabilities to insurance companies will most likely see only moderate success.

Tailoring their investment strategies and their sales approach to the specific needs of insurance companies is a worthwhile effort for asset managers. In continental Europe, insurers represent the largest source of externally managed assets (€1 trillion compared to €900 million from corporate and public pension funds), as reported by institutional investors in the Greenwich Associates 2017 Continental European Institutional Investors Study.

Opportunities in High-Margin Products

Outsourced assets are shifting toward higher-margin products due to the combined impact of low interest rates and Solvency II, the set of regulations dictating capital adequacy for insurers since January 2016. Compared to other institutional investors—most notably, pension funds—insurance companies have a much greater appetite for bank loans, infrastructure debt and real estate debt.

These three asset classes contain primarily unrated debt, and Solvency II provides insurance companies significant leeway in determining the capital charge required for these investments. If the insurer can credibly demonstrate that the risk profile is, for example, similar to investment-grade corporate debt, it will incur a similar capital charge, but with a significant pickup in yield for the investor.

“The Norwegian regulators’ proposed Solvency II requirements will require more buffer capital than the Solvency II requirements being proposed by EU regulators—a challenge in the low-interest rate environment. We are addressing these issues by investing in more illiquid assets in order to harvest the extra premium these assets should yield. Examples are direct real-estate lending, ... bank loans and re-lending.”

—Norwegian Insurance Company

Asset managers successfully selling these types of strategies have developed a strong set of skills to help insurance companies determine the appropriate capital charge. Needless to say, those asset managers that have built capabilities in these areas are well rewarded for their efforts. Margins are much higher than in traditional, liquid fixed-income investments. Furthermore, they represent "sticky" asset classes, requiring a long-term commitment by the investor.

There are also opportunities for managers focused on traditional liquid asset classes with insurance companies. But in order to succeed, these managers need a good understanding of the capital charges associated with their strategies and, in particular, detailed knowledge of how their strategies correlate with both the asset and liability side of any given insurance client—another key element of the Solvency II regulation.

Coalition Greenwich, a division of CRISIL, an S&P Global Company, is a leading global provider of strategic benchmarking, analytics and insights to the financial services industry.

We specialize in providing unique, high-value and actionable information to help our clients improve their business performance.

Our suite of analytics and insights encompass all key performance metrics and drivers: market share, revenue performance, client relationship share and quality, operational excellence, return on equity, behavioral drivers, and industry evolution.

About CRISIL

CRISIL is a leading, agile and innovative global analytics company driven by its mission of making markets function better. It is majority owned by S&P Global Inc., a leading provider of transparent and independent ratings, benchmarks, analytics, and data to the capital and commodity markets worldwide.

CRISIL is India's foremost provider of ratings, data, research, analytics, and solutions with a strong record of growth, culture of innovation, and global footprint.

It has delivered independent opinions, actionable insights and efficient solutions to over 100,000 customers through businesses that operate from India, the U.S., the U.K., Argentina, Poland, China, Hong Kong, and Singapore.
